## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 45-75 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

First, the specification as originally filed fails to provide support for step (b) in claims 45, 46 "scanning said image in each of the units of the imagewise exposed and developed film to form a first electronic image representation of said imagewise exposure based". The specification discloses the scanning an imagewise exposed and developed imaging element to form a first electronic image representation of the said imagewise exposure, but not scanning the image in each of the unit such as presented in the claimed invention.

Second, the specification fails to disclose the method of image formation in the absence of heating the photothermographic material to form an image. The invention as claims fails to include the heating step, which is critical in the formation of an image, in the absence of including heat developing step the thermal solvent does not activate the blocked developer which is the essence of the present invention.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 1752

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 45-75 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The language in the preamble "photothermographic element that is a photographic film" is unclear as it is confused with the term "photothermographic" and "photographic" since the term "photothermographic film" and "photographic film" have been used in the art to describe the dry development material and wet development material. It is unclear whether it was intended to claim photothermographic material or photographic material, or both photothermographic material and photographic material.

5. Some of the formula presented in claims 58-59 is illegible that may cause from facsimile. Note for instance compound in claim 58, third compound, and last compound and second compound in claim 59. A new copy of claims 58-59 is requested.
